THE ENG INFO

IN THIS ISSUE

Midterms are here to stay..

They're here, and they aren't going away. Included in this issue are details about some of the SESS tutorials being offered this midterm season. Check 'em out!

~~PRESIDENT'S~~ COMM'S MESSAGE

Welcome back, everyone! Hope you had a great long weekend!

We interrupt your main program this week to bring you a little surprise. I'm Keaton Mollberg, your VP Communications—the guy who makes the 'Fo—and this week, due to me being away at AGMR this weekend and completely forgetting to remind El Presidente that he has an article to write up for today, I'm gonna give this whole "message" thing a go.

Firstly: if you see anyone wearing a kick-ass Manitoba sweater (likely accompanied by a tired face), chat with them about AGMR (Annual General Meeting and Retreat) from this past weekend! It's safe to say that this year's AGMR was one of the most interesting yet, and we have stories to tell.

If you've been connected to any social media, you've probably heard of the massive snowstorm that swallowed Manitoba this weekend. It just so happened that we travelled to AGMR while the storm was at its worst (huge props to Logan, our VP External, for keeping us and the vehicles in one piece for over the tedious stretch of road. Dominic Toretto would be very proud).

My crew was escorted to an emergency shelter in Saint Claude (the real MVP's) to wait for over 26 hours for the snow ploughs to clear the highways—with no heat, power, or cell service, just to keep it spicy. Other groups were stranded in other unpowered small towns, cheap motels, and generally where we *weren't* supposed to be. Nevertheless, we all arrived to AGMR late on Saturday to attend the last 1/3 of the conference. Any delegate would be excited to share their crisis and conference account with you!

Anywho, onto this week (a nice, short one too). This Saturday is SEC (Saskatoon Engineering Competition), which is a great chance to use your engineering skills and knowledge in practical applications. If you place 1st in any of the eight categories, you're able to attend WEC (Western Engineering Competition), which uSask is also hosting! Come grab a registration form and get it handed back before the end of Thursday!

Other than that enjoy your short and sweet week! And, as tradition holds:

- > What do you get when you pour root beer in a square glass?
- > Beer.

Craving a caesar,
Keaton M.

WEEK AT A GLANCE

Rules for Ag Bag Drag

- Obey all traffic laws when chasing/evading (it's better to get captured than to get someone killed)
- If you're not having fun, you're not doing it right
- Both the Ag Bag Drag car and the Eng Van must be "Out and Available" each night (at the very least, parked somewhere it can be found and stolen)
- The keys to both vehicles must be left in/near the vehicle when not in use
- Both vehicles must remain unlocked when not in use
- The vehicles are not to be taken outside city limits
- If you capture a vehicle, give the previous drivers a ride home (don't be a dick).
- The Ag Bag Drag car MUST always have the details for the Ag Bag Drag party painted on, regardless of which college has the vehicle.
- DO NOT spray paint over windows, mirrors, lights, etc.
- NO DRINKING AND DRIVING

BXXR OLYMPICS RECAP

Last Monday was the annual Bxxr Olympics against the Agros—I could say it was a night to remember, but I have a feeling not all of us do. The Ags made us break a sweat during the first half of the night, but it all came down to the pong tournament. Not surprisingly, the engineers brought home the solid victory and earned bragging rights for the rest of the year! Thank you to Amelia, our VP Events, the Agros, and everyone who signed up as a team or came to spectate and join in on the fun!

100 YEARS FLASHBACK

2003: Computer and Environmental who?

The tiles shown here were painted in 2003, featuring the logos of each engineering discipline that the college offered at the time. They hang overhead in the SESS office, now surrounded by many other painted tiles. Environmental and computer engineering tiles were painted just last year (2017!), revealing just how new these disciplines of engineering are.

The EWB USask Member Learning is **CANCELLED** this week due to the Thanksgiving long weekend.

However, if you are still interested in international development and making a positive change, stay tuned for future meetings and events!

For any questions, email ewbusaskpresidents@gmail.com.

Have you ever wondered what an underground potash mine looks like? Or how to process potash? On October 28th, CIM Saskatoon Student Chapter is hosting a money and mill tour of Nutrien's Cory Mine and Mill!

This mine and mill tour is an excellent opportunity to see part of how potash mines function. Attendees will have the opportunity to learn about the potash processes at Cory. Attendees will also have the opportunity to ask engineers relevant questions. Buy a ticket now!
